PROFILE SUMMARY

AI Engineer specializing in multi-agent systems, evaluation benchmarks, and production automation pipelines. Shipped 9 AI agent systems in 12 weeks — from multi-tool orchestration to domain-specific benchmarks published on HuggingFace. Experienced in LLM integration, RAG architectures, CRM automation, and centralized agent coordination patterns.

PROFESSIONAL EXPERIENCE

AI Agent Systems Engineer — 10 Academy 02/2026 – Present
Remote
- Built 9 production-grade AI agent systems across evaluation, orchestration, and data engineering
- Designed centralized orchestration patterns using LangGraph StateGraph with fan-out/fan-in parallelism
- Published a domain-specific benchmark (250 tasks) on HuggingFace with a SimPO-trained judge model
- Achieved 35.2% pass@1 on DataAgentBench through 3-layer context engineering (zero fine-tuning)

Back-end Developer Project Lead — NextGen Solutions 07/2025 – 01/2026
Dallas, USA (Remote)
- Led backend development lifecycle from architecture to deployment, using AWS Cognito, App Runner, ECR, and Docker

API Integration & Automation Specialist — ReiSearch 11/2024 – 06/2025
Wyoming, USA (Remote)
- Built automated CRM integration pipeline connecting GoHighLevel and Home Depot
- Reduced manual data entry by 90% and improved lead generation by 30%

AI Developer — iCog-Labs 03/2024 – 10/2024
Addis Ababa, Ethiopia
- Built RAG-based search engines and Neo4j recommendation system, improving retrieval accuracy by 40%
- Enhanced a wellness chatbot with conversational AI, increasing user retention by 15%

AI Researcher — Ethiopian Artificial Intelligence Institute 04/2023 – 03/2024
Addis Ababa, Ethiopia
- Refined facial recognition systems (+10% accuracy) and Amharic NLP models (-12% word error rate) for conversational AI

Flutter Developer — A2SV 11/2021 – 04/2023
Addis Ababa, Ethiopia
- Architected and launched SkillBridge educational platform using Flutter + Firebase, scaling to 1,000+ users with offline support and AI-powered feedback
- Implemented BLoC state management for robust, testable architecture
- Engineered hybrid exam architecture (local vs. backend evaluation) for country-specific scoring logic (Ethiopia & Rwanda), reducing data response time by 60%

KEY PROJECTS

The Ledger — CQRS/Event-Sourcing Backend
- PostgreSQL event store with cryptographic audit chain, MCP server (9 tools, 6 resources), counterfactual what-if analysis, 166 tests

Client Projects — Biiftuu & Kebena Heritage (Flutter + FastAPI)
- Biiftuu: restaurant ordering/loyalty/reservations app — Flutter + FastAPI + Next.js admin, trilingual (EN/Amharic/Afan Oromo), Dockerized
- Kebena Heritage & Connect: offline-first cultural app (Isar) with AI text-to-speech backend, Cloudflare R2, push notifications

Conversion Engine — Automated Lead Generation System
- 5-signal enrichment pipeline (Crunchbase, job posts, layoffs, leadership changes, AI maturity scoring)
- ICP classification, signal-grounded email composition, multi-turn conversation management, CRM sync
- Centralized state machine: NEW → EMAILED → REPLIED → QUALIFIED → BOOKED

Automaton Auditor — Multi-Agent Code Auditing System
- 7-agent "Digital Courtroom" (3 detectives + 3 judges + deterministic synthesis) with LangGraph fan-out/fan-in parallelism
- Audits a repository in 45 seconds for $0.02

Oracle Forge — Natural Language Data Analytics Agent
- Evaluated on DataAgentBench (54 queries, 12 datasets, 9 domains)
- 3-layer knowledge base injection: schema hints → domain knowledge → corrections memory
- 35.2% pass@1 against 54.3% SOTA ceiling through pure context engineering

Tenacious Sales Bench — Agent Evaluation Benchmark
- 250 tasks (signal grounding, tone consistency, resource honesty, workflow correctness), built from real Conversion Engine failure traces
- SimPO-trained judge model published on HuggingFace

EDUCATION

M.S. in Artificial Intelligence 05/2026
Carnegie Mellon University Africa

B.S. in Software Engineering and Computing Technologies (AI Major) 07/2024
Addis Ababa University

SKILLS

AI/Agent:	LangChain, LangGraph, OpenAI API, Gemini API, Groq, HuggingFace Transformers
Patterns:	Multi-agent orchestration, RAG, CQRS/Event Sourcing, context engineering, evaluation design
Backend:	Python (Advanced), FastAPI, Flask, Django, Node.js
Data:	PostgreSQL, Neo4j, MongoDB, DynamoDB, NetworkX, Pydantic
Cloud/DevOps:	AWS (Cognito, App Runner, ECR), Docker, Git, CI/CD
Integrations:	GoHighLevel, HubSpot, Resend, Cal.com, Langfuse, LangSmith
